Cleaning robots for swimming pools - fully automatic, persistent and powerful

YOUR PARTNER FOR SWIMMING POOL HYGIENE
“PURE CLEANLINESS IMPRESSES.”
Lifeguards and management staff of public and private swimming pools know that the visitors of their pool enjoy even more when the swimming pool is clean. Regular and basic cleaning of the floors of swimming pools is an aesthetic as well as hygienic necessity.

Mariner 3S AG is your dependable partner for the hygiene and cleanliness of your pool. Our fully automatic swimming pool cleaning robots are high-tech products. For an excellent cost benefit-ratio you get “Swiss Quality”; efficiency, effectiveness, ease of use and customer-friendly service.

The investment will pay off through more cleanliness and hygiene. Durability and reliability in daily professional use and by reducing the workload of the personnel thanks to the fully automatic cleaning - lane by lane.

For decades, we have been inspiring our customers worldwide. Because: Pure cleanliness is guaranteed!
FOR EVERY SWIMMING POOL

Swimming pools are different and unique - ranging from the rectangular Olympic pool and the creative adventure pool all the way to the small leisure pool at the hotel. Over the decades, Mariner 3S has developed a wide range of products for professional use and always optimised them. We offer the perfect cleaning robot for every pool.

The robot fulfils its job when it cleans the pool efficiently and effectively. The shape, size and texture of the pool, the most concise cleaning time and the degree of contamination defines the optimal device: sufficient filter capacity, required extraction width and suitable cleaning program.

Safety assured: The positive effect on the hygiene due to the regular use of our cleaning robots and their mechanical removal of bacteria was proven in laboratories.
EXPERIENCE IN SOLUTIONS

Mariner 3S AG was founded in 1945 as a family business. Since 1970 we have been developing cleaning equipment for swimming pool floors.

- **1970** SBR-3 / 700 – hand-held device
- **1975** submatic – remote-controlled cleaning of swimming pool
- **1979** mariner 3S standard – the smaller submatic
- **1982** mariner 3S aps 2000 – first automatic cleaning - lane by lane
- **1990** mariner 3S nova – professional device with low voltage operation
- **1997** mariner 3S navigator – an intelligent navigation system (world debut)
- **1998** mariner 3S compact 400 & progress – operation in protective extra-low voltage
- **2002** mariner 3S compact 600 – the “big brother” of the compact 400
- **2005** mariner 3S compact YELLOW – device with special brushes
- **2006** mariner 3S topliner & navigator II – even more powerful and faster
- **2010** mariner 3S clubliner & clubliner plus – a new standard for small pools
- **2014** mariner 3S topliner / navigator II HD – integrated high pressure for bio-baths
- **2016** mariner 3S proliner & proliner plus – device with a compact design for larger pools
“SENSITIVITY FOR PRECISION AND QUALITY.”

Mariner 3S AG - family business with conviction

QUALITY HAS TRADITION

Swiss Mariner 3S AG combines all the expertise for modern pool-cleaning robots: The technical product development, manufacturing and installation as well as the quality control and distribution is all performed by the company. As an independently family-run company, we can quickly take decisions according to the customer demands and implement new developments.

Our team, consisting of 70 employees in Germany, France, Italy, Netherlands, Austria, Poland, Switzerland and Spain have one thing in common: the sensitivity for precision and attention to detail, which is also a positive characteristic of Swiss people. This commitment to accuracy ensures that our devices and related services are of the highest quality. We see this as our obligation.

In 2009, Mariner 3S AG emerged from the company founded in 1945. In addition to the parent company in Remigen, there are three subsidiaries: Mariner 3S GmbH, Germany (since 1984), Mariner 3S France, France (since 1997) and Mariner 3S España, Spain (since 1999).

The corporate culture is characterised by customer-driven mind-set and dedicated, well-trained specialists. From development and design to manufacturing and sales and service.
IN USE WORLDWIDE

The world at a glance: Mariner 3S AG is a globally active company. Everything comes together in the rural idyll in northern Switzerland. Our modern corporate building with light flooded production hall in Remigen, Kanton Aargau, combines the departments of development, purchasing, production, administration, sales and customer service.

The high-tech cleaning robots from Mariner 3S AG are being successfully used worldwide -- in all European countries as well as in Asia, America and Australia. Our company philosophy is based on two factors: our proximity to our customers and the personal contact from person to person. We see ourselves as consultants and want to offer solutions.
Mariner 3S AG works together with customers from all over the world. This enables us to get familiar with the wishes and requirements at first hand and make use of them for further product development. Competent suppliers support us. In order to scientifically substantiate the cleaning function of our devices, we exchange knowledge with institutions and laboratories, e.g. with ETH Zurich and FH Northwestern Switzerland. In this way, we always provide “state-of-the-art” products.

Each cleaning robot undergoes a quality inspection at our facility. We also exclusively produce CE compliant products and test the devices for safety in accordance with the CE standards. You can rely on our quality!
THE PUMP AS TECHNICAL HEART

How has the pump evolved: The pool robots have emerged from the company’s field of activity, which manufactured powerful pumps for the transport of fresh and waste water. Pumps with good hydraulics combined with an effective filter system are still the centrepiece of our cleaning robots – they can also be seen as “under-water-propelled pumps”. The expertise of these pumps and their “power” are the technical and mechanical strength of our cleaning robots and distinguish our products from the rest in the market.

Reliable mechanics, components precisely manufactured from high quality materials such as stainless steel, age-resisting plastic and sophisticated and reliable electronics are the building blocks for the longevity of our Mariner 3S pool robot. In addition, the robots are assembled at our own facility by a well-integrated and well-trained team.

Sustainable quality, durable products, environmentally friendly and effective: Our demands on our products are not modest. You benefit from it as a customer.
CLEANING PERFORMANCE, ECONOMIC EFFICIENCY, CUSTOMER UNDERSTANDING

“Excellent water quality”
“The automatic drive saves us a lot of time. The cleaning performance corresponds to our high standards and ensures that our guests can rely on an excellent water quality.”
Head of a mineral-thermal bath

“Optimum economic efficiency”
“With Mariner 3S’s pool vacuum cleaners, we are using technologically advanced devices. In addition, the price/performance ratio is consistent. Therefore, an optimum economic efficiency is absolutely guaranteed across the entire life cycle. The devices run daily and the highest possible level of cleanliness is constantly ensured in our pool.”
Member of the executive board of a spa and sauna paradise

“Intensive training of the personnel”
“We were especially impressed by the intensive training of the personnel by Mariner 3S. This enables us to prevent downtime periods and save costs, which may occur through non-optimal operation of the devices. We are very satisfied in every respect.”
Head of a family spa

What our customers say
Our strengths - Your advantages

PROFIT FROM...

• ...thorough and efficient cleaning and better hygiene
  Thanks to a strong pump, an effective filter system, good hydraulics and an active brush - even bacteria are efficiently eliminated and the use of chemicals are reduced

• ...intelligent driving patterns
  Comprehensive cleaning of all pool shapes, including inclinations or built-in jumping pits

• ...easy to use
  The devices are easy and intuitive to use and designed for everyday use

• ...low costs - maximum hygiene in the bathroom
  Mariner 3S cleaning robots reduce costs and are amortized over time through performance and efficiency
“CLEAN SWEEP FOR SUCCESS.”
